

## Interview

Clone project - Laravel 8

git clone [git@github.com:HelloBlossom/Laravel-interview-project.git](https://github.com>HelloBlossom/Laravel-interview-project.git)

1. Setup Laravel with Docker and Mysql
2. Setup Authentication
3. Add information to User Model - Country (String) and phone number (numbers)
4. Add API key - ( Random string with 32 chars )
5. Create API - /api/v1/getMyUsername
  - a. When calling “/api/v1/getMyUsername?apikey=**correct**key”

It returns Username, Country, Phone of user with API key
  - b. When calling “/api/v1/getMyUsername?apikey=**wrong**key”

It return 404 page not found
